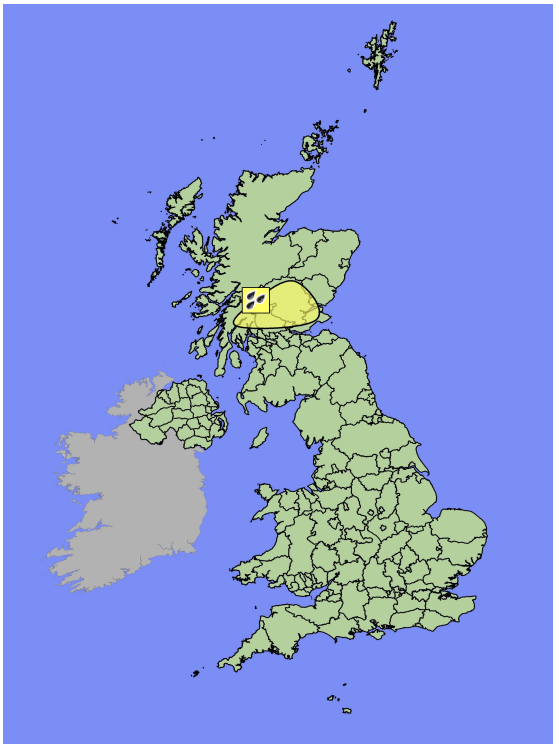
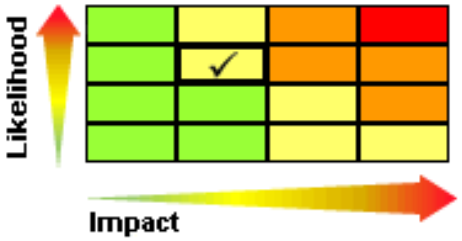
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system will become slow-moving across southern and central Scotland on Thursday, bringing outbreaks of rain which will be heavy and persistent in places. As the front encounters colder air to the north some snow is likely on high ground, chiefly above around 300 metres. There remains some uncertainty over precisely which areas will be most-affected.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **06:00 on Thu, 31st Jan 2013** until **18:00 on Thu, 31st Jan 2013**

Rain will become persistent and heavy at times during Thursday with snow on high ground. Rain falling on already saturated ground will lead to localised flooding.

The public should be aware of possible disruption.
